

THESE DUNES AREN'T MADE FOR WALKING

Heading to the beach? Be kind to the plants!

**Dunes provide a first line of defense
against storm waves and flooding.**

**By trapping wind-blown sand, dune plants
help build and stabilize the dunes. They also
provide important benefits, such as wildlife habitat.**

**Although dune plants can tolerate harsh coastal conditions,
they can't withstand the pounding of feet and vehicles.**

**PROTECT THE DUNES.
USE DESIGNATED ACCESS WAYS.**
